

Hydroxychloroquine prevention of COVID-19

We are looking at whether hydroxychloroquine prophylaxis can protect healthcare workers from catching COVID-19

Participants will take hydroxychloroquine or placebo tablets for 3 months and will need to attend monthly visits at their local participating hospital for a maximum of 5 months

Participants must have a smart-phone

Does your work in the ambulance service bring you into contact with patients and are you interested in taking part?

If so, register your interest through the study website www.copcov.org, and your local study team will be in touch.
